

A. Cross-country (pooled)

Each point = one country-cohort; age 18–25 at PIAAC; z=0 anchored to 2006/2012 OECD mean

PIAAC score (z, anchored to 2012 reference)

Literacy

$\rho = 0.73$ ($\beta = 1.66$, SE 0.15 $R^2 = 0.531$)

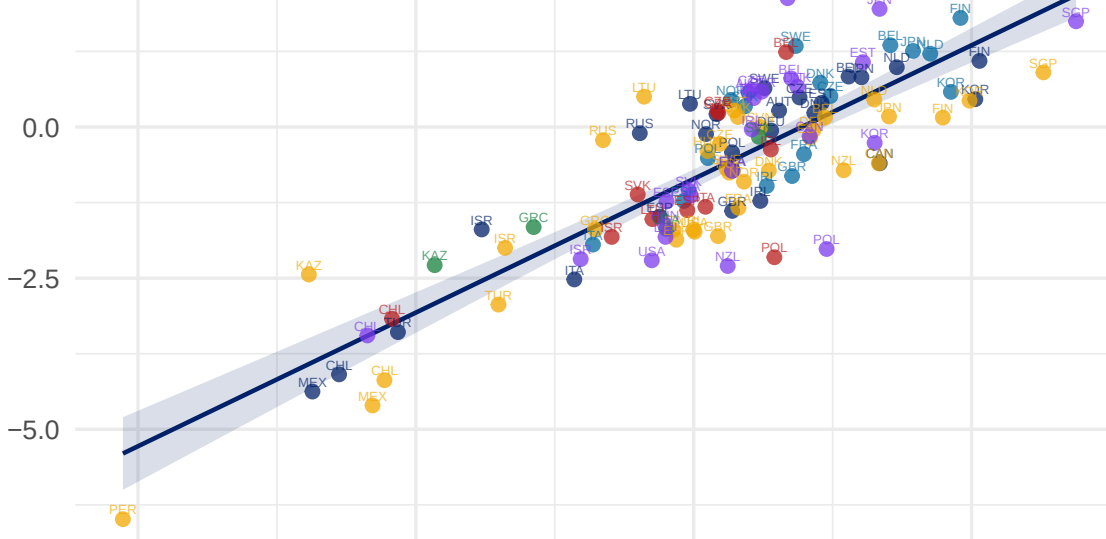

PISA score (z, anchored to 2006 reference)

PISA cohort

- PISA 2003
- PISA 2006
- PISA 2009
- PISA 2012
- PISA 2015
- PISA 2018

Numeracy

$\rho = 0.84$ ($\beta = 2.21$, SE 0.14 $R^2 = 0.699$)

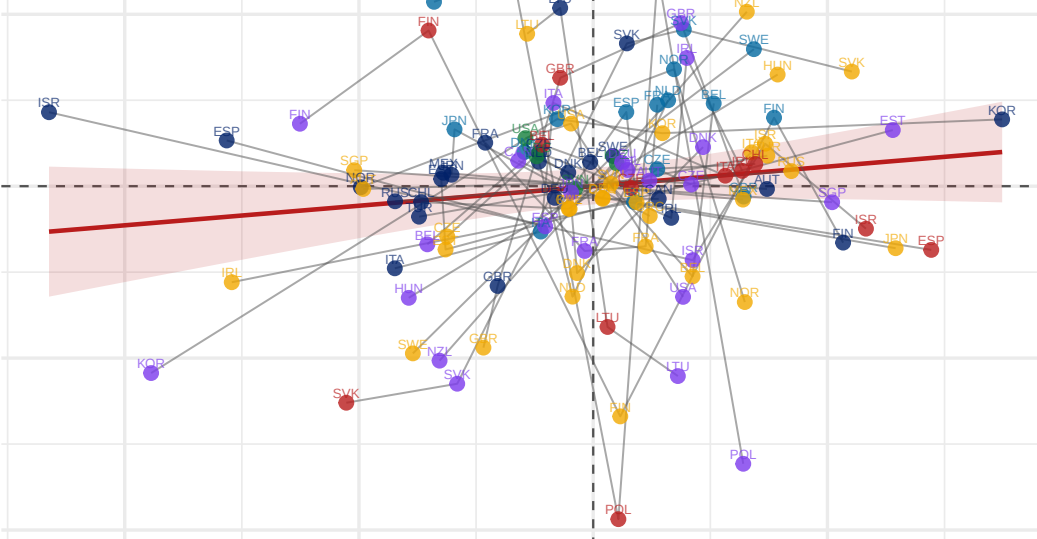

B. Within-country (cohort gains)

Country means removed; lines connect cohorts within a country; slope = within-country correlation

PIAAC z-score deviation from country mean

Literacy

$\rho = 0.13$ ($\beta = 0.46$, SE 0.32 $R^2 = 0.018$)

PISA z-score deviation from country mean

PISA cohort

- PISA 2003
- PISA 2006
- PISA 2009
- PISA 2012
- PISA 2015
- PISA 2018

Numeracy

$\rho = 0.16$ ($\beta = 0.67$, SE 0.38 $R^2 = 0.027$)
